GLOBAL FOOD CRISIS OUTLINE

Thesis statement: Global food crisis is a sum total of a myriad of factors including erratic climate and weather pattern's poor agricultural practices, as well as governmental and non-governmental policies and influences. However, the severity of the crisis can be mitigated through the implementation of comprehensive global initiatives and programs.

- This presentation will highlight the food problem in a global perspective, while presenting the causes, mitigation, and future directions.
- The global food crisis is primarily a consequence of human activities; therefore, the solution to the current issue can be derived from the combined human efforts across the world.

I. Global Food Crisis

- a. Introduction
- b. Problem statement
- c. Hunger representation in a global perspective

II. Climate change

- a. Impacts of climate change on food production
- b. Desertification, climate change, and loss of crop yields (biodiversity).

III. Agricultural practices' contribution towards the global food crisis

- a. Focus should be on high yield foods that can feed all

- b.** Agricultural technologies should be used in order to increase food production

IV. Governmental and non-governmental policies and influences

- a.** Governmental policies and influences
- b.** Non-governmental organizations' impacts on food insecurity

V. The economic impacts of globalization and urbanization on food insecurity

- a.** Economic impacts of globalization
 - I.** Widening gap between the poor and the rich
 - II.** Production of high priced foods instead of foods the can sustain all
 - III.** Global fuel prices have a direct impact on the food prices
- b.** Urbanization impacts on food security
 - I.** Food must undergo numerous processes before reaching the final consumer
 - II.** Increased price and reduced production

VI. Enabling factors of global food crisis

- a.** Over-reliance on global food aid agencies
- b.** Changes in population dynamics

VII. Inferences

- a.** Changes in economy impact the lower classes' ability to buy food
- b.** Dependence on global aid programs causes governments to ignore the development of food sustainability initiatives
- c.** Agriculture suffers from low budgetary allocations and funding

VIII. Conclusion

- a. Food insecurity is a threat to millions of lives
- b. Effective communication of the diverse population needs to various governments and non-governmental organizations is critical to food security.
- c. Reduction and mitigation of climate change causal factors is essential to global food security.
